

ECO COLLECTION

Environmentally Friendly
Promotional Products and Gifts

WOOD

Wood is a natural and renewable resource which provides a unique surface for branding. Wood can produce variances in the grain pattern, colour and branding of promotional products which highlights its natural look.

SLATE

Slate is a naturally occurring stone that is inherently eco-friendly. It is extremely durable, easy care and absorbent so it is an excellent material for making coasters and serving boards.

BAMBOO

Bamboo is the fastest growing plant on our planet and grows up to 10cm a day which makes it one of our most renewable resources. It requires very little water to grow and can be re-harvested many times without harmful effects on the plant or the environment. Bamboo can produce variances in the grain pattern, colour and branding of promotional products which highlights its natural look.

CORK

Cork is considered an eco-friendly material as the process of harvesting the material doesn't harm the tree, making it a completely renewable and sustainable resource.

RICE HUSK

Rice husk is a waste product with little value and the agricultural industry often dispose of it by burning, which creates air pollution. Using it to make promotional products helps to reduce the amount of plastic, accelerates the product's biodegradability, and produces a trendy natural look.

COTTON

Cotton plants produce fluffy white fibres which are harvested, spun into thread and then woven into fabric. Cotton fabric is soft, durable, washable and completely renewable. There has been a massive increase in the use of cotton for shopping bags, tote bags and drawstring bags now that single-use plastic bags are on the decline.

JUTE

Jute is a plant fibre that is spun into a coarse thread and woven to make a robust heavy-duty fabric. It is commonly used for bags to store grain but more recently it has become an affordable on trend fabric for shopping bags due to its strength, sustainability and stunning natural look. It can also be blended with cotton to produce juco which is another material that is becoming very popular due to its strength and smoother branding surface.

PAPER

Trees are a natural and renewable resource that absorb CO₂ from the atmosphere and store carbon in wood, which can be pulped and used to manufacture paper and cardboard. Paper derived from sustainably grown wood pulp is a natural product that can be recycled repeatedly.

GLASS

Glass is an aesthetically pleasing and extremely sustainable material which is manufactured from sand. It is easily recycled and has become an environmentally friendly natural alternative to single-use plastic bottles and cups.

STAINLESS STEEL

Drinkware manufactured from stainless steel has an extremely long lifespan; keeping your brand in the public arena for longer. It can be recycled numerous times and is a great replacement for single-use drinkware. Stainless steel doesn't require a plastic lining which ensures a chemical and odour-free beverage.

REUSE AND REDUCE

Being environmentally aware doesn't mean only choosing products that are manufactured from sustainable materials. Reusable promotional products replace the need for single-use plastic items and send a positive message that is aligned with your brand.
